Teagasc Launches Lean Techniques in the Food Industry

Dear Zenda,

Getting it right the first time is no longer sufficient, keeping it right and building on robust processes to innovate and create is essential if your company is to sustain its Competitive Advantage.

Teagasc together with HOSCA have custom designed this training programme to expose our clients to the latest Lean thinking. Lean Manufacturing is all about eliminating waste from the entire production process whilst simultaneously exceeding customer requirements in terms of Quality, Cost and Delivery.

This programme seeks participants from companies who have identified the need to eliminate waste and improve overall efficiency and who value the importance of improvement and innovation. It is intended to draw participants from a number of food processing related companies in Ireland to create a cluster approach to learning and development. Participants will be exposed to a series of proven tools in the areas of Lean and Continuous Improvement and will participate in a series of improvement projects, one selected by each company, in order to build skills and be able to lead such projects in their own workplace on completion of the programme.

Teagasc will launch the program at their Ashtown facility on June 18th.

Agenda
